

MEMORANDUM

First Aid / CPR / AED

In the construction industry, 29 CFR 1926.50(c) provides:

In the absence of an infirmary clinic, hospital, or physician, that is reasonably accessible in terms of time and distance to the worksite, which is available for the treatment of injured employees, a person who has a valid certificate in first-aid training from the U.S. Bureau of Mines, the American Red Cross, or equivalent training **that can be verified by documentary evidence**, shall be available at the worksite to render first aid.

OSHA has long interpreted the term "near proximity" to mean that emergency care must be available within no more than 3-4 minutes from the workplace, an interpretation that has been upheld by the Occupational Safety and Health Review Commission and by federal courts.

As part of the policy of LEGO Construction Co. and to ensure proper compliance with OSHA requirements regarding first aid standards.

In all LEGO Co projects, subcontractors are required to have a worker and / or supervisor who is trained in First Aid and CPR, therefore the only valid certifications are:

1.-American Red Cross

2.- American Heart Association.

So any other certification will not be admissible.

Please take this communication into account to avoid delays
